

## splash micro information fact sheet

### **THE ULTIMATE ADVANCE IN NON-INVASIVE SKIN CONDITIONING.**

#### *What is it?*

A state-of-the-art refinishing procedure i.e. it removes skin debris, and reduces imperfections, blemishes, wrinkles and unwanted pigmentation in the skin. (Rubs off a few layers which grow back like new "baby" skin).

The patented machine uses a sterile diamond tipped wand to abrade the top layer of skin, then vacuuming off the skin debris, dirt and dead skin build up.

#### *How does it work?*

The SplashMicro machine blasts the skin and rubs off the damaged layers of skin providing a deeper, more effective exfoliation than possible with traditional peels.

#### *Results?*

Immediate improvement to skin's texture and appearance. Look forward to softer, smoother younger looking skin. Roughness gone, wrinkles minimized.

#### *Things it fixes?*

Helpful for acne and oily skin. Reduces oiliness and large pores. Improves the signs of sun damage as well as combating the effects of age.

#### *Recovery?*

Most patients experience only minor flushing. As no anesthesia is required, you can go back to work after treatment, although we recommend no makeup to allow the skin to regenerate and breathe. Avoid sunbaking or exercise for a day or two because sweat may sting the treated area. You can use a soothing moisturiser. Talk to our nurses about cosmeceuticals which further help to keep your skin surface clear.

#### *How Many Treatments?*

Improvement will continue throughout a 6 week course, one a week for maximum results. This is then followed with maintenance treatments. Each treatment takes about 30 minutes.
